

## **Android App Data Collection**

### Data being collected

- Start time: The start time of the interval we are measuring
- End time: The end time of the interval (When data was sent to db)
- Total time: Total time app was in foreground during interval (How long user interacted with the app)
- Total count: How many times user opened the app during the interval
- Last Used: Last time app was closed
- TimeStamp (Optional): When data was sent

To analyze the data we will monitor the change in the Total time, Total Count, and Last Used.
